11. Estimated time required to complete the application to beneficial use three years
12. Remarks: For use other than irrigation or stock watering, state number and type of units to be served or annual consumptive use. This application is a top filing on permit 26981. Additional cooling water is required for a proposed expanded manufacturing process. Present beneficial use was established at 68.5 million gallons per year for permits 26981, 26982 and 26983 combined. This application, together with the top filing for permits 26982 and 26983, requests an additional 31.5 million gallons (96.7 A.F.) per year appropriation from the ground water source. It is noted that no adverse quality deterioration occurs during the cooling process; therefore, the water is discharged to the Truckee River via the storm drainage system, i.e., the water is not consumptively used but returned to the system for reuse. The diversion rate request in item 12 is in addition to the 0.19 cfs (85 gpm) established in the Proof

Applicant Gering Products

of Beneficial Use for permit 26981. See permits 26981, 26982, 26983 for map of place of use and points of diversion.
